

MAXIMO BALUSTRADES CARE & MAINTENANCE

MAXIMO Aluminium and glass balustrades are low maintenance (compared to other materials such as wood), but still require some general cleaning to preserve their good looks.

MAINTENANCE:

The maintenance of aluminium and glass balustrades are both similar and the recommended cleaning schedule is identical. In urban areas cleaning should take place every three months and in Rural areas every six months. In industrial and marine environments (within 1km of the sea) cleaning should take place monthly with cold water and every six months with a warm water detergent wash.

Regular visual inspection (every few months) will help identify any issues, which can be addressed before becoming serious.

CLEANING ALUMINIUM:

In general, anodised or powder coated aluminium have a similar maintenance and cleaning schedule.

- 1 - Carefully remove any loose deposits with a wet sponge.
- 2 - Wash down using a nonabrasive soft brush and a mild household detergent solution to remove dust, salt, dirt and other deposits.
- 3 - Anodised finishes with greasy deposits or hard to remove grime, should be cleaned with a soft cloth dipped in white spirit, turpentine or kerosene, then wiped with a dry rag.
- 4 - Rinse off with plenty of clean fresh water.

DO remove obvious deposits as they occur.

DO NOT use abrasive-steel wool, scrapers, scouring liquids or powders to remove paint splashes - these will damage your anodised/powder coating.

DO NOT use aggressive solvents, thinners, petrol etc, on powder coating as these solvents will attack gloss levels and reduce its life expectancy.

DO NOT let any solvents used on anodised finishes come into contact with any rubber components as they can degrade them.

DO NOT expose your anodised/powder coatings to excessive heat, heaters or hot air guns - these may damage the coating.

CLEANING GLASS PANELS:

Cleaning your glass balustrade panels is similar to how you would clean most household glass.

- 1 - Wash down with clean water to loosen any residues, deposits or dirt.
- 2 - If needed, wipe with a mild detergent and a soft cloth.
- 3 - Rinse off with plenty of clean water, to ensure that all detergents and grime are rinsed off.
- 4 - For a streak free finish, you can dry the glass with a soft cloth.

DO make sure the glass is cool to touch when cleaning; do not clean while in the direct sunlight.

DO NOT leave any cleaning solution on the glass sealants for long periods.

DO NOT use abrasive cleaning solutions or materials.
